

Are you an auntie, uncle or cousin of an individual affected with Epidermolysis Bullosa (EB)?

Are you over 18 years old?

We would like to hear from you!

What is the project about?

This research study aims to explore the understanding, attitudes and choices regarding family planning within wider family members of individuals affected with EB.

What is involved?

You will be asked to take part in a one-to-one interview online, about the experience of having a wider family member affected with EB, and your thoughts and attitudes regarding family planning decisions.

Why take part?

It is our understanding that currently there is no research regarding the thoughts and feelings of wider family members (aunties, uncles and cousins) regarding family planning.

By undergoing this interview, you can share your story and have your voice heard and increase understanding on how wider family members of an individual affected with EB feel about starting families. This may help DEBRA UK identify further support and resources required for this group of individuals.
